

PS -- How To Install Custom Shapes

Here's how to load or install custom shapes (.csh files) in Photoshop:

----- WIN -----

To Temporarily Load a Custom Shape:

- Select the Custom Shape tool.
- In the Options Bar, open the Custom Shape Picker.
- Click in the upper, right corner to open the Shape Picker flyout menu.
- Choose Load Shapes.
- Navigate to the folder that has your custom shape and double click on it.

The Short Method:

Double click on the custom shape to instantly load it at the bottom of the Custom Shape Picker.

To Permanently Install a Custom Shape:

Place a copy of a custom shape in the following folder:

C:\Program Files [or Program Files (x86) if you have a 64-bit system] \Adobe\Your version of Photoshop\Presets\Custom Shapes.

Close Photoshop, and the next time you open it you'll see the custom shapes in the Custom Shape Picker flyout menu.

To temporarily Load a Custom Shape:

- Select the Custom Shape tool.
- In the Options Bar, open the Custom Shape Picker.
- Click in the upper, right corner to open the Shape Picker flyout menu.
- Choose Load Shapes.
- Navigate to the folder that has your custom shape and double click on it.

The Short Method:

Double click on the custom shape to instantly load it at the bottom of the Custom Shape Picker.

To Permanently Install a Custom Shape:

Place a copy of a custom shape in the following folder:

Applications > Adobe Photoshop (your version) > Presets > Custom Shapes

Close Photoshop, and the next time you open it you'll see the custom shapes in the Custom Shape Picker flyout menu.
